Abstract not available for DE19927621

Abstract of corresponding document: **EP1061267**

The sealing unit for a swivel motor comprises two frame-like sealing elements (1, 2) provided with internal preloading elements tending to enlarge the outer contour of the sealing elements, and a spring element (4) tending to preload the sealing elements against one another in the axial and/or radial directions of the motor. The unit is always fitted with a preload into the space between the outer and inner cylindrical components of the motor.
